

Enterprise Security & Communications Infrastructure

- Cloud-Based Security • Communications Infrastructure
- Portable & Remote Solutions • Electrical Services

Verkada Platinum Plus Partner | VPSN Certified | Licensed Electrical Contractor | Licensed Security Provider | Australia-Wide Delivery Capability

Connect Services At A Glance

Connect Services is a Queensland-based provider of cloud-managed security, communications infrastructure, portable and remote solutions, and electrical services, supporting commercial, industrial, mining, utility, government and education clients across Australia. Originally founded in 2007 as an electrical contractor, the business repositioned in 2022 to focus on the cloud-based security and communications capabilities that enterprise clients and modern procurement processes now demand.

Est. 2007

Refocused in 2022 on cloud security, communications & portable solutions

#1 in Australia

Fully Licensed

Electrical Contractor, Communications Cabler & Security licences held

Why Clients Choose Connect Services

Connect Services combines the systems, safety standards and management expertise of a large-scale contractor with the responsiveness and personal service of a local business.

-  Integrated delivery of security, communications and electrical works through one accountable team
-  Specialist cloud-managed security expertise as Australia's leading Verkada delivery partner
-  Rigorous safety, compliance and quality management, supported by real-time digital documentation
-  Enterprise and multi-site capability, from single facilities to nationally coordinated rollouts
-  Responsive, locally based service backed by dedicated account management and mature safety systems
-  Practical field experience across complex, high-stakes and remote operating environments

- 👁️ Poor visibility and inconsistent security standards across multiple or remote sites
- 🏠 Legacy CCTV, access control or alarm systems that can't scale or integrate
- 📡 Communications infrastructure that no longer supports modern operational demands
- 🛡️ Security risks across construction, mining, industrial and public-facing sites
- 🔧 Complex projects requiring integrated electrical, data, security and connectivity works
- 📊 Downtime, compliance gaps and fragmented contractor management

Our Capability

Connect Services delivers complete solutions for new projects, facility upgrades and ongoing service and maintenance programs, built around four core capability pillars.

Cloud-Based Security

As Australia's leading Verkada delivery partner, we design, install and support cloud-managed security platforms that give clients real-time visibility and control across every site.

- Verkada cloud security cameras, access control, intercom and visitor management
- Alarm systems and 24/7 remote monitoring
- Traditional and cloud-based CCTV and video surveillance
- Multi-site security management and system integration

Communications Infrastructure

We build the data and communications backbone that commercial, industrial and remote operations depend on.

- Structured and fibre cabling, including Cat6/Cat6A and single-mode /multimode fibre, delivered with industry - leading testing and certification
- Wireless networks, access points and Wi-Fi design
- Starlink and cellular connectivity for remote sites
- Data centre, disaster recovery and infrastructure audit services

Portable & Remote Solutions

For construction, mining and remote operations, our portable and off-grid systems deliver enterprise-grade security and connectivity wherever fixed infrastructure isn't available.

- Solar-powered, off-grid CCTV and surveillance towers
- Remote site monitoring, asset visibility and real-time alerts
- Rapidly deployable portable security and communications trailers
- Scalable deployment across multiple remote locations

Electrical – Commercial & Maintenance Capability

Our electrical capability supports every security and communications deployment, alongside dedicated maintenance and power programs for critical facilities.

- Programmed, reactive and preventative maintenance, including 24/7 emergency response
- Power generation, UPS and battery energy storage systems
- Test and tag, RCD testing, thermal imaging and emergency lighting testing
- HV/MV infrastructure, PLC/SCADA and process control systems for industrial and utility clients
